## **JLT Mobile Computers Delivers Uncompromising Flexibility with New Rugged Broadband Modem**

**JLT Mobile Computers, developers of reliable mobile computers for demanding environments, has launched its jLink™ modem, a rugged mobile broadband modem. Used together with the JLT dockable vehicle computer jFlex™, JLT offers customers a computer solution that combines the reliability of a fixed mounted computer with the flexibility of a handheld computer. The jLink modem can also be used together with other computers.**

Frequently, customers in logistics and transportation need a mobile computer that can be removed from the vehicle in one easy step, thus increasing flexibility and lowering installation and service costs. Previously, such a flexible solution involved a compromise with regard to broadband connection because the radio modem with its antennas was integrated in the computer. By placing the radio modem in an external unit, this part of the installation can be made permanent in the vehicle, utilizing external antennas for optimum reception.

The jLink modem has been developed primarily for use in combination with the jFlex computer for customers in outdoor logistics, harbors and transportation, but the modem can also be used with JLT1214S, JLT VERSO and other computers. The modem supports GSM, GPRS, EDGE as well as UMTS, HSDPA, and HSUPA, and has the ingress protection class IP65. It functions in temperatures from minus 30 °C to plus 70 °C and is resistant to vibrations in forklifts, trucks and other vehicles.

The jLink modem is available for delivery today.
