## Press Release 4/2015

### JLT Mobile Computers Joins the Navis Ready Partner Program

Building on its existing success in container terminal operations, JLT unveils plans to validate its rugged computers for the Navis terminal operating system

**Växjö, Sweden, 30 March 2015** \* \* \* [JLT Mobile Computers](#), Swedish developer and manufacturer of rugged computers for demanding environments, has announced it has joined the Navis Ready partner program and will initiate validation of its rugged vehicle-mount computers against the Navis N4 terminal operating system. Validation of JLT hardware is expected to be completed soon and will underline that the JLT products deliver the best possible performance and reliability in the most challenging working environments.

The Navis Ready Program is a validation program for suppliers of different technologies designed to operate within a marine container terminal operating environment. All devices designated Navis Ready have been tested in a simulated environment to ensure that specific messages have integrated effectively with a specific release of Navis N4 terminal operating system (TOS).

JLT mobile computers are already used extensively in this environment and by becoming validated under Navis Ready, both existing and future customers will be assured that the hardware and software have not only been designed to work together but have been validated to provide an optimal customer experience.

## **Confidence boost**

Validation is an important endorsement of quality and reliability. Shipping ports and terminals win and maintain business based on their up-time and their efficiency in moving containers from ship to shore and then onto their final destination. Reliable and efficient IT equipment is a critical element in the overall communication infrastructure, and instrumental in delivering quality of service.

Whether tracking cargo through a port or enabling the automation of processes or equipment, the demands on computer hardware and wireless connectivity in ports are substantially higher than in the average operating environment. Validation and acceptance into the Navis Ready Program will demonstrate that JLT mobile computers meet and exceed these demands.

“We are experiencing an acceleration in the number of customers within the port segment using our rugged computers,” said Per Holmberg, CEO, JLT Mobile Computers. “By collaborating with Navis, whose terminal operating system is used by the world’s leading container terminal operators, we can demonstrate that our solutions comply with Navis Ready requirements, providing an extra level of confidence to our customers.”

JLT is participating and exhibiting at the Navis World Event in San Francisco on March 29 through April 1, where the world’s leading marine container terminal operators and supply chain industry experts come together.

## **About JLT Mobile Computers**

JLT Mobile Computers is a leading developer of rugged mobile computers for demanding environments. These PC-type computers are developed and manufactured in Sweden for professional use and are characterized by very high reliability in the face of moisture, dust, vibration, electromagnetic fields or extreme temperature – reliability that is required for use in areas such as transportation, warehousing / logistics, forestry, mining, automation, military and rescue vehicles. JLT operates globally with offices in Sweden and the US, complemented by a network of sales partners that provide complete solutions and local support. JLT has delivered over 90,000 PCs since its inception and the company’s turnover in 2014 was SEK 72 million. The headquarters in Växjö, Sweden houses the development, service and administration departments. The company was founded in 1994 and since 2002 has been listed on the NASDAQ OMX, First North, under the symbol JLT by Remium as Certified Advisor.
