JLT Mobile Computers named 'Top Software & Technology Provider 2021' by *Food Logistics*

Complete rugged IT products designed from the ground up to ensure safe, efficient and reliable operations across the global cold food and beverage supply chain earned JLT recognition in Food Logistics awards.

Växjö, Sweden, 21 December 2021 * * *   *Food Logistics*, the only publication exclusively dedicated to covering the movement of product through the global cold food supply chain, named JLT Mobile Computers to its 2021 Top Software & Technology Provider award, which honor software and technology providers that ensure a safe, efficient and reliable global cold food and beverage supply chain.

"Software developments and emerging technologies are what make the world go 'round. They're what make supply chains move, even when the world stops. They're what keeps people, products and plants safe. They provide traceability, visibility, efficiency and credibility. And, the winners from this year's award prove that there are no limitations to what software and technology can do in the supply chain space," says Marina Mayer, Editor-in-Chief of *Food Logistics* and *Supply & Demand Chain Executive*.

"We are very proud to have earned recognition as one of the top food logistics technology providers for our rugged hardware, software and service offering," says Per Holmberg, CEO JLT Mobile Computers Group. "JLT has a long history of working with leading companies in the food and beverage sector. Engineered with the industry's key feature requirements in mind, our rugged vehicle-mount computers, tablets and handhelds ensure reliable uptime and optimum data communication in use cases across the sector – from the factory floor to the yard, from road, rail or port to the cold storage warehouse."

Getting all the key elements along the entire food supply chain to work together efficiently and reliably is critical to success but presents huge challenges. Considerable reliance exists on passive and active data collection to monitor, analyze, and optimize all aspects of the food manufacture ecosystem. With a comprehensive portfolio comprising the latest Android as well as traditional Windows vehicle-mount, tablet and handheld computers in combination with software and services, JLT provides the food and beverage industry with end-to-end IT solutions to help tackle these reliability and efficiency challenges.

At the device level, JLT computers such as the popular JLT6012™ series provide built-in sensor technology to monitor temperature, vibration and other common food logistics stress values. This data is invaluable for utmost reliability, as it allows customers to actively preempt downtime, thereby increasing productivity.

In the networked food supply chain world of today, reliable connectivity is another key requirement for optimum efficiency. Even under the most challenging conditions, JLT computers give customers reliable access to the

best wireless WAN, LAN and Bluetooth performance in the rugged market. Designed to maintain critical data sessions, they also provide operators a clear and concise user interface which can be tailored for individual customers.

Besides the extreme reliability of their devices, what also sets JLT apart for the *Food Logistics* Top Software & Technology Provider award is the dependability and extent of their services and support. As a committed partner, JLT is on hand to help customers in the food and beverage sector solve their toughest business challenges every step of the way – starting with a detailed assessment of their exact circumstances and the specific needs of their application, before advising on the best device selection and necessary system customizations.
